

# Patient Guide SOLUTIONS

## Partner with Patient Guide Solutions to meet your 2024 goals

The new year presents opportunities to set goals for the year ahead, with our focus at PGS being to help you tackle readmission rates, specifically.

With that, there are a variety of factors that impact readmissions. We know it can be difficult to lower rates when you have to consider everything from comorbidities to comprehension to medication compliance - all while trying to present information in a way that closes the healthcare literacy gap. Patient Guide Solutions' standard admission guide is a ready-to-go tool that provides patients exactly what they need to know for better outcomes – both at the hospital and once home.

In addition to our admissions guide, we've created a suite of resources for patients and providers alike, with more on these below.

### PGS Patient Resource Library

You know that our guides put easy-to-understand, medically accurate information at your patients' fingertips. Now, our guides go further with our *Patient Resource Library!*

With this resource your patients can learn beyond the boundaries of print. It is packed with easily accessible information to help produce better outcomes and reduce readmissions – with various topics, including our *At Home After* series, teaching your patients how to avoid complications after discharge with heart failure, stroke, pneumonia, and many more.

*\*The Patient Resource Library will be available with the next printing of your guide. Ask your advocate for more details.*
